

SHARING WEB SESSIONS

Abstract of the Disclosure

A web session may be shared between two or more browser clients both viewing the same content on the same web content server. By providing a proxy device on the server side of the network, bandwidth may be utilized effectively. As one example, a help session may be initiated via a proxy device on the server side of the network. Session sharing may be provided with an additional server side browser. The server side browser may be manned by help desk personnel who may communicate with the user of a client browser at the same time both the user and the help desk personnel are viewing the same web page.
